

MAGNETO TA-2088 TELEPHONE

TA-2088

**FIELD ELECTRONIC
MAGNETO
TELEPHONE**

This indoor magneto telephone is specially designed for communication between two line points.

Manufactured with much strictness, to ensure many years of efficient and credible service.

Enables to call the second party without being related to the public telephone line, specially in cases where the public telephone exchanges are out of order, or the lines are busy, and there is an urgent need to call the second party.

Each phone can be connected in parallel to more than one set, and can also be connected to any telephone exchange for connection to the outside line. This magneto telephone has an electronic ringer generator which replaces the old fashioned mechanical one .

The call to the second party is made by pushing a button, with a red LED indicating the call is being made.

The magneto telephone is operated by two LR-"D" Alkaline batteries.
